Projects

● **Chatbot**
January 2025 - February 2025

The chatbot project focuses on developing an intelligent conversational agent capable of interacting with users in natural language. Designed using NLP (Natural Language Processing) and machine learning techniques, the chatbot can understand user queries, provide relevant responses, and perform tasks such as information retrieval, FAQs, and basic customer service functions. The bot is integrated into a web/mobile platform and supports both text and voice interfaces

● **Capstone**
This capstone project focused on solving a real-world problem by applying the knowledge and skills acquired throughout the academic program. The project involved research, planning, design, implementation, and evaluation phases. Key objectives included [mention main goals], and the outcome was [briefly describe the results or impact]. The project helped develop skills in [list soft and hard skills, like teamwork, programming, data analysis, project management.
February 2025 - March 2025

In this Capstone Project, I applied the skills gained through Google Workspace certifications to **design and build a fully functional website** using AI-powered tools. The project demonstrates my ability to take a concept from idea to execution while focusing on user needs, design principles, and digital storytelling
